The modern face of System Fidelity

At System Fidelity, we know about sound. Part of our job is to make use of our knowledge to offer the best sound quality at very reasonable prices.

The 3000 Series is a proof of it: MDF cabinets, neodymium magnets and special domes for the tweeters, are some of its features, which are essential to obtain sound so clear and balanced.

But our job goes beyond the sound because our products are intended to be a part of an environment liked by the users. That's why we make a big effort in dressing our models with a look and finish that make possible the total integration with the decoration of the place where they have to be installed.

So, we have given the reinforced cabinets of the 3000 Series a fashionable image, simple but attractive at the same time. The straight lines and angles, together with the impeccable finish in pear or wengue give them personality and qualify them to become a part of the decoration of any room, however trendy it is.

The 3000 Series is a new proof of our philosophy and ability to offer the best products for your money... Unbeatable value for money.
